The Apollo Guidance Computer: Architecture and Operation (Springer Praxis Books) Frank O'Brien
Designing a mission for a flight to the Moon requires balancing the demands of a wide array of spacecraft systems, with the details of tending each component generating complex and often contradictory requirements. More than any other system in the Apollo spacecraft, the Apollo Guidance Computer drove the capabilities of the lunar missions. In the 1960's, most computers filled an entire room yet the spacecraft's computer was required to be compact and require little power. When compared to modern systems, the AGC's design limitations and lack of speed presented formidable challenges. Yet, hardware and software engineers overcame these difficulties, and their creation was able to guide a new and complex spacecraft and its precious human cargo away from the safety of Earth and towards a new world. Although people today find it difficult to accept that it was possible to control a spacecraft using such a 'primitive' computer, it nevertheless had capabilities that are advanced even by today's standards.

The Apollo Guidance Computer: Architecture and Operation is the first comprehensive description of the Apollo computer, beginning with its internal organization to its user interface and flight software. Particular emphasis is placed on the instruction set, Executive capabilities, the Interpreter and the detailed procedures for mission application software. Launch, landing on the Moon and entry back on Earth are explained in rich detail and show how the computer was an integral part of the spacecraft operation. As a comprehensive account, it spans the disciplines of computer science, aerospace engineering and spacecraft operations. **The Apollo Guidance Computer: Architecture and Operation** is an essential reference for space historians and engineers, and serves well as a complementary text for computer science courses.

From reader reviews:

Lori Leavitt:

Book will be written, printed, or descriptive for everything. You can recognize everything you want by a reserve. Book has a different type. As you may know that book is important thing to bring us around the world. Next to that you can your reading proficiency was fluently. A e-book The Apollo Guidance Computer: Architecture and Operation (Springer Praxis Books) will make you to become smarter. You can feel considerably more confidence if you can know about anything. But some of you think that open or reading a book make you bored. It is not necessarily make you fun. Why they are often thought like that? Have you searching for best book or suited book with you?

Graciela Johnson:

Now a day people who Living in the era where everything reachable by match the internet and the resources within it can be true or not need people to be aware of each details they get. How many people to be smart in obtaining any information nowadays? Of course the answer then is reading a book. Looking at a book can help persons out of this uncertainty Information specially this The Apollo Guidance Computer: Architecture and Operation (Springer Praxis Books) book because book offers you rich data and knowledge. Of course the knowledge in this book hundred per cent guarantees there is no doubt in it you probably know this.

Tammy Mangold:

Information is provisions for anyone to get better life, information today can get by anyone with everywhere. The information can be a knowledge or any news even a concern. What people must be consider while those information which is from the former life are difficult to be find than now's taking seriously which one is suitable to believe or which one the particular resource are convinced. If you obtain the unstable resource then you have it as your main information it will have huge disadvantage for you. All of those possibilities will not happen inside you if you take The Apollo Guidance Computer: Architecture and Operation (Springer Praxis Books) as the daily resource information.

April Cotton:

Reading a reserve can be one of a lot of activity that everyone in the world adores. Do you like reading book and so. There are a lot of reasons why people fantastic. First reading a reserve will give you a lot of new information. When you read a guide you will get new information simply because book is one of many ways to share the information or their idea. Second, reading through a book will make anyone more imaginative. When you reading through a book especially fiction book the author will bring someone to imagine the story how the people do it anything. Third, you could share your knowledge to other folks. When you read this The Apollo Guidance Computer: Architecture and Operation (Springer Praxis Books), you could tells your family, friends as well as soon about yours book. Your knowledge can inspire the others, make them reading a publication.
