Probability and Statistics for Computer Scientists Michael Baron

In modern computer science, software engineering, and other fields, the need arises to make decisions under uncertainty. Presenting probability and statistical methods, simulation techniques, and modeling tools, **Probability and Statistics for Computer Scientists** helps students solve problems and make optimal decisions in uncertain conditions, select stochastic models, compute probabilities and forecasts, and evaluate performance of computer systems and networks.

After introducing probability and distributions, this easy-to-follow textbook provides two course options. The first approach is a probability-oriented course that begins with stochastic processes, Markov chains, and queuing theory, followed by computer simulations and Monte Carlo methods. The second approach is a more standard, statistics-emphasized course that focuses on statistical inference, estimation, hypothesis testing, and regression. Assuming one or two semesters of college calculus, the book is illustrated throughout with numerous examples, exercises, figures, and tables that stress direct applications in computer science and software engineering. It also provides MATLAB[®] codes and demonstrations written in simple commands that can be directly translated into other computer languages.

By the end of this course, advanced undergraduate and beginning graduate students should be able to read a word problem or a corporate report, realize the uncertainty involved in the described situation, select a suitable probability model, estimate and test its parameters based on real data, compute probabilities of interesting events and other vital characteristics, and make appropriate conclusions and forecasts.

Some of you maybe will update themselves by examining books. It is a good choice in your case but the problems coming to you actually is you don't know what one you should start with. This Probability and Statistics for Computer Scientists is our recommendation so you keep up with the world. Why, as this book serves what you want and want in this era.

Nathan Pope:

In this age globalization it is important to someone to receive information. The information will make you to definitely understand the condition of the world. The health of the world makes the information much easier to share. You can find a lot of sources to get information example: internet, paper, book, and soon. You can see that now, a lot of publisher that print many kinds of book. The particular book that recommended to you is Probability and Statistics for Computer Scientists this guide consist a lot of the information of the condition of this world now. This kind of book was represented how do the world has grown up. The words styles that writer make usage of to explain it is easy to understand. The particular writer made some exploration when he makes this book. That's why this book suitable all of you.
